ABSTRACT

The Movie Ticket Booking System is a C-based program designed to automate and simplify the movie ticket purchasing [process](#). It allows users to select a movie, show time, seat type, and number of tickets, while also offering discount and snack options. The program calculates the total cost after applying discounts and adding snack charges, ensuring accurate billing. It includes input validation to handle invalid choices, enhancing user experience. This project demonstrates the use of conditional statements, arithmetic operations, and structured program flow to simulate a real-world movie booking scenario efficiently and interactively through a console-based interface.

PROBLEM STATEMENT

In today's fast-paced world, manual movie ticket booking often leads to long queues, human errors, and time delays. Customers face inconvenience in selecting movies, show timings, and seat preferences efficiently. To overcome these challenges, there is a need for a computerized system that simplifies the entire process. The Movie Ticket Booking System aims to provide an automated platform where users can easily choose a movie, show time, seat type, number of tickets, discounts, and snacks. The system ensures accurate price calculation, error handling for invalid inputs, and a smooth, user-friendly experience for booking movie tickets.

ALGORITHM

Step 1: Start the program.

Step 2: Display a welcome message and list of available movies with their ticket prices.

Step 3: Ask the user to choose a movie (1–3).

- If the choice is invalid, display an error message and terminate the program.

- Otherwise, store the price of the selected movie.

Step 4: Display available show timings (10:00 AM, 2:00 PM, 6:00 PM).

- Ask the user to select a show time.

- If the choice is invalid, display an error and terminate.

Step 5: Display seat type options (Normal, Premium, VIP).

- Ask the user to select a seat type.

- Add the respective extra charge to the base ticket price.

Step 6: Ask the user to enter the number of tickets.

- Validate the number (must be greater than 0).

- Calculate the total = ticket price × number of tickets.

Step 7: Display discount options (Student – 10%, Senior Citizen – 15%,

No

Discount).

- Apply the selected discount to the total amount.

Step 8: Display snack options (Popcorn, Cold Drink, Combo, or No Snacks).

- Add the selected snack price to the total bill.

Step 9: Calculate the final amount using:

Final Amount = (Total – Discount) + Snack Price

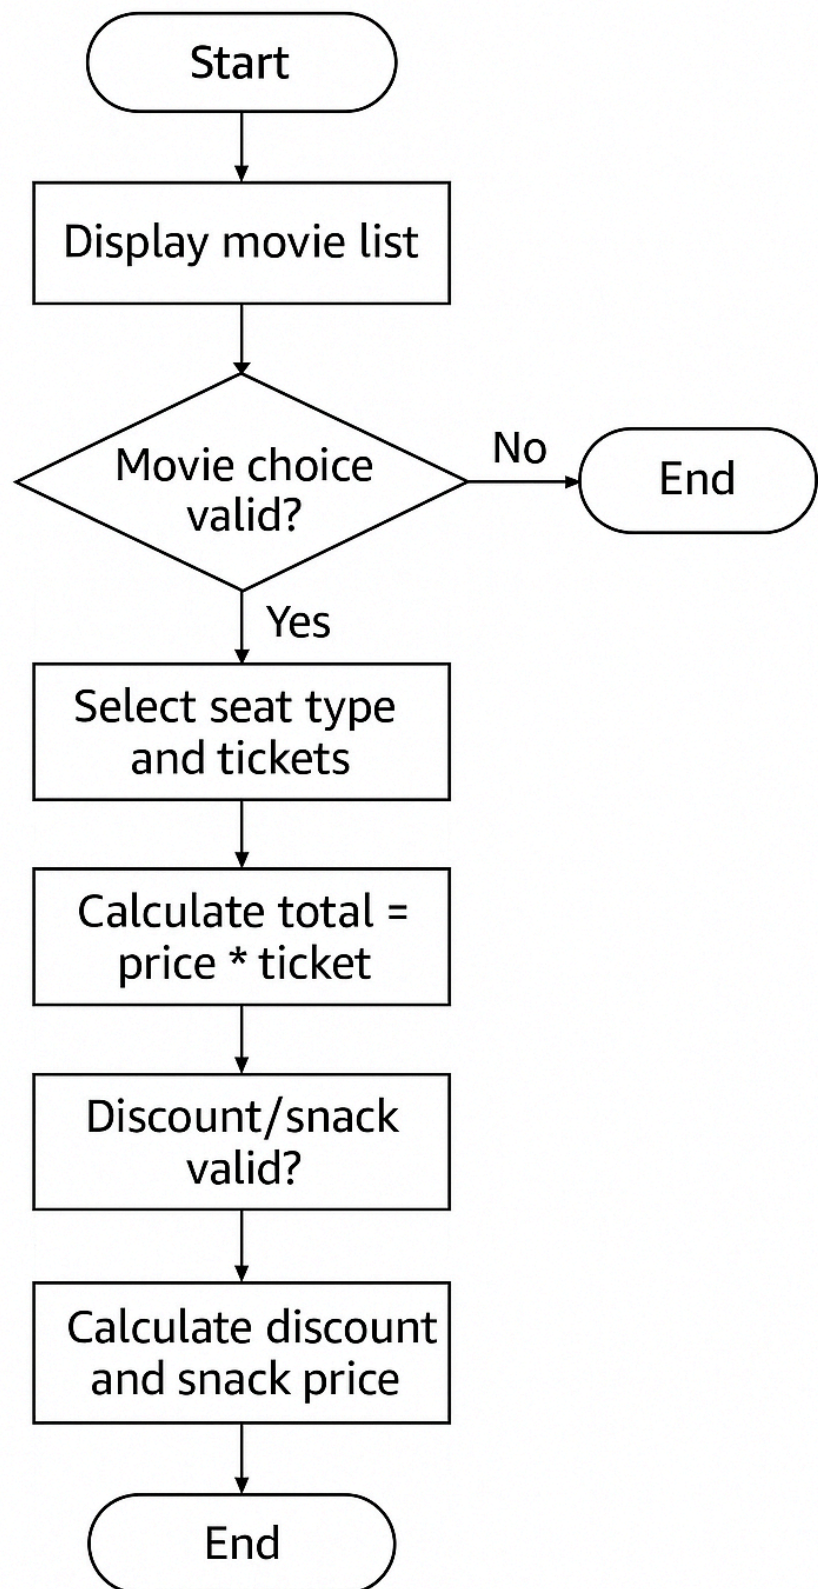

Step 10: Display the Booking Summary showing:

- Movie name, show time, seat type, number of tickets, discount type, snack

choice, and final amount.

Step 11: End the program.

PSEUDOCODE

SOURCE CODE

OUTPUT

Welcome to Movie Ticket Booking System

Available Movies:

1. RRR - ₹200 per ticket
2. Bahubali-2 - ₹220 per ticket
3. OG - ₹250 per ticket

Enter your movie choice (1-3): 1

You selected RRR

Select Show Time:

1. 10:00 AM
2. 2:00 PM
3. 6:00 PM

Enter your choice (1-3): 2

You selected 2:00 PM show.

Select Seat Type:

1. Normal - No extra charge
2. Premium - +₹50 per ticket
3. VIP - +₹100 per ticket

Enter your seat type (1-3): 2

You selected Premium seats.

Enter number of tickets: 2

Select Discount Type:

1. Student - 10% off
2. Senior Citizen - 15% off
3. No Discount

Enter your choice (1-3): 1

Student discount applied: ₹50.00

Would you like to order snacks?

1. Popcorn - ₹120
2. Cold Drink - ₹80
3. Combo (Popcorn + Drink) - ₹180
4. No Snacks

Enter your choice (1-4): 3

Combo added

Booking Summary:

Movie: RRR

Show Time: 2:00 PM

Seat Type: Premium

Discount: Student (10%)

Snacks: Combo (Popcorn + Drink)

Tickets: 2

Movie Total: ₹500.00

Discount: ₹50.00

Snacks: ₹180.00

Final Amount: ₹630.00

THE END
